

Optimum to support IFS Applications ERP implementation for Global Specialist Protein Company

Binding Site will implement IFS Applications 8 ERP to replace spreadsheets and various legacy systems including Sage. Optimum has been selected as the ERP training partner to support their new solution, which will be rolled out across the UK and all subsidiaries, to approximately 650 staff members.

The introduction of IFS Applications does not simply mean new technology, but a new way of working with new processes and more interaction across departments. The user community will experience significant change and therefore effective and positive end user training is critical to the programme.

Optimum will create bespoke training materials for HR, Projects, Health and Safety, CRM, Manufacturing and Mobile Applications, and these materials will form part of the internal training framework which will be managed by the Training Manager. The core IFS ERP training materials will form a blueprint which will be used for future deployments at the subsidiaries and for business as usual training.

"We are delighted to be appointed as the ERP training partner for such an interesting and complex organisation," said Joanne Harrison, Sales Director at Optimum. "This is more than just an ERP system implementation. There is significant change to Binding Site's user community, it's key that the training programme we develop also focusses on the business change and changing mindsets."

About Optimum

Optimum is the IT training consultancy, specialising in end-user systems training. Our mission is to bring people and technology together to ensure maximum value from your systems.

This is achieved by designing, developing and delivering tailored, user focused training solutions, using our proven methodology, your customised system build and incorporating your business processes, allowing your people to fully engage with the system.

About Binding Site

Binding Site is a Specialist Protein company committed to the research, development, manufacture and distribution of innovative, immunodiagnostic assays for the global laboratory market. Binding Site was founded by a group of researchers from the Medical School at Birmingham University, UK. In the early 1970s, this group were researching innovative ways of producing antibodies.

Today, they continue to build upon specialist protein heritage offering an expanding menu of over 200 protein assays across a range of clinical diagnostic systems.
